

ROULE RODRIGUES

OWNER'S MANUAL

Your complete guide to running the website & admin dashboard

Premium scooter & vehicle rentals · Rodrigues Island

Website & system by Pezotech LTD

1. Getting Started

Logging in

- Open **roule-rodrig.vercel.app/admin** in any browser.
- Enter your admin password. (Stored securely in Vercel — never shared in the code.)
- On a phone, tap the **■ menu** (top-left) to move between sections; it closes automatically when you pick one.

The Golden Rule — two kinds of sections

This is the most important thing to understand:

- **“Save Changes” sections (Content group):** you edit, then you **MUST** click the yellow **Save Changes** button (top-right) or your edits are lost. These are: Announcement, Hero, Fleet, Pricing, Contact Info, Featured Reviews, Island Map, Trip Planner, Ride Routes, Events, Useful Numbers, Sponsors, Branding.
- **Live sections (save instantly):** every action saves immediately, no button needed. These are: Dashboard, Bookings, Enquiries, Customer Reviews, Waitlist, Partners, Marketplace, Gallery.

Uploading photos

Anywhere you see **Change Image / Upload**, choose a file from your phone or computer — it uploads automatically and the photo appears instantly. Use clear, bright, landscape photos for the best look.

2. Overview — Daily Running

Dashboard

- Four stat cards: Total Bookings, Pending, Confirmed, Enquiries (tap one to jump there).
- **Today's Reminders:** tomorrow's pickups and today's returns, each with a green **WhatsApp** button to message that customer in one tap.
- Quick Actions: shortcuts to the most-used sections.

Bookings

- Every booking request from the website, newest first.
- Change status: **Pending** → **Confirmed** → **Completed / Cancelled**.
- **Confirming a booking is the key action** — it blocks those dates on the public calendar and triggers the customer's reminder emails.
- Tap the email or phone to contact the customer directly.

Enquiries

- Messages sent through the Contact form.
- Each has a **■** delete button to clear out old/spam messages.

Customer Reviews

- Reviews customers submit on the website wait here for your approval.
- Tabs: Pending / Approved / Rejected.

- **Approve** → it appears publicly in “Share Your Ride”. **Reject** → stays hidden. Nothing shows publicly until you approve it.

Waitlist

- Emails captured from the “Stay in the loop” section.
- **Copy emails** (paste into a newsletter), **Export CSV**, or delete entries.

3. Business — Make Money

Partners

- Hotels / guesthouses / agencies that refer customers to you.
- Each gets a referral code and a commission %. When a booking uses their code you can track what you owe them.
- Toggle a partner active/inactive.

Marketplace

- Local businesses (restaurants, tours, hotels, activities, shopping) shown in the “Local Deals” section.
- Per listing: name, category, description, special offer, photo, opening hours, contact, **WhatsApp number** and a **Google Maps link**.
- **WhatsApp / Directions buttons** appear on the card so tourists reach the business in one tap.
- **Service options:** Delivery / Pickup / Dine-in badges.
- ★ **Featured** = appears first — this is your **paid placement** slot (charge businesses to be featured).
- **Active** toggle shows/hides a listing.

4. Content — The Website Itself

*Remember: these all need the **Save Changes** button.*

Announcement

- The bold band at the very top of the site (with a megaphone + moving shine — hard to miss).
- Add **multiple messages** — they rotate automatically with dot indicators.
- Set the colour and toggle the whole bar on/off.

Hero

The big opening screen: eyebrow text, the 3-line headline, the subheadline, and the background image.

Fleet (+ Vehicle Categories)

- **Vehicle Categories panel** (top): turn Scooters / Cars / E-Bikes / Motorbikes / Bicycles / Kayaks ON or OFF. ON = shown on the site. Filter tabs appear automatically when 2+ categories have vehicles.
- Per vehicle: photo, name, badge, tagline, price, **category**, description, and an **Available / Unavailable** toggle.

Pricing

The tariff table: daily / 3-day / weekly price per vehicle. Adding a vehicle in Fleet adds its row here.

Contact Info

Phone, **WhatsApp number(s)** (you can add several), email, location and opening hours. This is where you set the real WhatsApp number that powers the green floating button.

Gallery

Upload photos → they appear automatically in the website gallery. (Saves instantly.)

Featured Reviews

Hand-picked testimonials you write yourself (separate from customer-submitted reviews). Name, origin, star rating, text.

Island Map

- The map dots: name, category (the dot colour), coordinates, description, and a **photo**.
- On the site, tapping a place opens Google Maps directions (distance + the visitor's live location) and shows your photo.

Trip Planner

- The real Rodrigues places the AI arranges into day-by-day itineraries.
- Per place: name, emoji, category, time of day, duration, description, insider tip, and a **photo** (opens full-screen when tapped).
- You control the content; the planner still builds the schedule automatically.

Ride Routes

Curated scenic scooter routes: name, difficulty, distance, duration, description, stops (one per line), a **Google Maps link**, and a photo.

Events

Festivals / markets: title, date (free text like "Every Saturday"), description, location, photo. The section stays hidden until you add at least one.

Useful Numbers

A tap-to-call directory grouped Emergency / Taxi / Other. Add your taxi partners here. Entries with a placeholder number (XXXX) stay hidden until you set a real one.

Sponsors / Ads

- A strip of sponsor logos near the footer — sell these slots to local businesses.
- Master ON/OFF toggle for the whole strip, plus show/hide each sponsor.
- Per sponsor: logo, optional link.

Branding & Social

Upload your logo (replaces the text wordmark) and add Instagram / Facebook / TikTok / WhatsApp links for the footer.

5. Common Tasks — Step by Step

Add a car (or any new vehicle type)

- Fleet → Vehicle Categories → turn ON “Cars”.
- Add a vehicle, set its category to Cars, give it a price and photo.
- Pricing → set its daily / 3-day / weekly rate. **Save Changes**.
- A “Cars” filter tab now appears on the site, and it shows in the booking calendar.

Confirm a booking

- Bookings → find the request → click **Confirmed**.
- Those dates are now blocked on the public calendar; the customer gets a reminder before pickup (if email is set up).

Approve a customer review

- Customer Reviews → Pending tab → **Approve**. It appears publicly straight away.

Add a restaurant with WhatsApp + directions

- Marketplace → New Listing → fill name, offer, photo.
- Add the WhatsApp number, opening hours and a Google Maps link.
- (Optional) tick Delivery / Pickup / Dine-in and ★ Featured. Save.

Set the real WhatsApp number (floating button)

- Contact Info → WHATSAPP / PHONE → enter your number with the country code, e.g. **+230 5912 3456**.
- **Save Changes**. The green button appears immediately. (It stays hidden while the number is a placeholder.)

6. Behind the Scenes (one-time setup)

Publishing changes

Content you edit in the admin saves to the database and appears on the live site immediately.
Code/design changes are deployed automatically by Vercel when updated.

Turn on Analytics (free)

Vercel dashboard → your project → **Analytics** tab → Enable. Then the **Speed Insights** tab → Enable.
You'll see visitor numbers and load speed.

Google visibility

- **Search Console**: verified via a meta tag. Submit the sitemap (sitemap.xml). “Couldn't fetch” right after submitting is normal — it fixes itself in 1–2 days.
- **Google Business Profile**: create one at business.google.com — this is what puts you on Google Maps for tourists.

Turn on automatic emails (optional)

- In Vercel → Settings → Environment Variables, add **RESEND_API_KEY** (free key from resend.com) and **OWNER_EMAIL**.
- Then booking confirmations + “pickup tomorrow / return today” reminder emails send automatically. Without the key, bookings still work — only the auto-emails wait.

Custom domain

When you connect a domain like `roulerodrigues.mu`, add the env var

NEXT_PUBLIC_SITE_URL=https://roulerodrigues.mu in Vercel — sitemap, share links and SEO update automatically.

7. Troubleshooting

Problem	Fix
WhatsApp button doesn't show	Set a real number (no XXXX) in Contact Info and Save.
A photo shows as a broken icon	The image file is missing — re-upload it in the relevant admin section.
Booking emails not sending	Add RESEND_API_KEY + OWNER_EMAIL in Vercel (see section 6).
Sitemap “couldn't fetch” in Google	Normal right after submitting — wait 1–2 days, it flips to Success.
A new section isn't on the site	Empty sections (Events, Sponsors, etc.) stay hidden until you add content / toggle on.
Edits disappeared	You were in a Content section and didn't click Save Changes.

8. What's Next (roadmap ideas)

Bigger features that can be built when you're ready — each is its own project:

- **Multi-photo galleries** everywhere (several photos per vehicle / place, with delete).
- **Online deposit / payment** (MCB Juice, MIPS or Stripe) to take real reservations.
- **P2P Taxi / Tourism Mobility marketplace** — drivers register, tourists book, you take a commission.
- **Hotel Partner Network** — referral links + QR posters, hotel dashboards, leaderboard and automatic payouts.
